# Aperio<sup>™</sup> Technology – Wireless Locking Evolution for Online Access Control

Aperio Hub

Aperio 570 Series Cylinder

Aperio wireless access control door

- Upgrade mechanical locks to online access control by simply replacing the cylinder
- Extends existing access control system
- Cost efficient
- Fast & easy installation
- Real time authentication
- Use existing access cards

ASSA ABLOY's state of the art Hi-O technology connects electronic door components together over a CAN (controller area network) data network. Intelligence is built into each device instead of a central logic unit. This allows plug and play capability and enhanced security.

**Smart:** Devices provide diagnostic information including high-low voltage, sabotage detection and cycle counters. Remote monitoring will provide both predictive and reactive maintenance.  
**Simple:** Plug and play system. Every device is connected with a four wire cable, and standard connectors, enabling fast and accurate installation.  
**Secure:** Encrypted communication, automatic monitoring and self diagnosis.

Aperio is a new technology developed to compliment existing electronic access control systems, providing end users with a simple, intelligent way to upgrade the controllability and security level of their premises.

Any number of doors can be equipped with Aperio enabled locks at a much lower cost than a traditional wired access control door today – and most of the time without impacting the existing installation or changing cards.
