

# The all new ES2100. Premium security has evolved.

Multi-voltage 10–30Vdc

Combined with Lockwood 3570 series mortice lock for door position monitoring

Patented field selectable fail safe/fail secure

The all new ES2100 is the latest product to join the iconic Padde by Lockwood range of electric strikes. Tested in accordance with Australian standards, this is a premium locking solution that is rated to 1.5 million cycles.

In addition to the standard monitoring features, the ES2100 boasts a unique integrated door position (reed) switch. The reed switch is activated by a specialised Lockwood mortice lock or a standard door magnet for installations with tubular latches.

Designed with flexibility in mind, the changing of fail safe and fail secure modes has never been easier. The patented mechanism allows for changing modes in seconds – simply loosen the two modes screws, slide to desired position and re-tighten!
